

1. Group Composition

Name	Email	Initial responsibilities
Vidhi Sikarwar	vidhi.sikarwar@berkeley.edu	Group Leader / Representative - Data identification, compilation, and EDA
Keertana Arun	keertana001@berkeley.edu	Group Member - Data identification, compilation, and EDA
Darsh Patel	darshp@berkeley.edu	Group Member - Go over Chetty et al. and identify relevant variables and outcomes

2. Chosen Paper

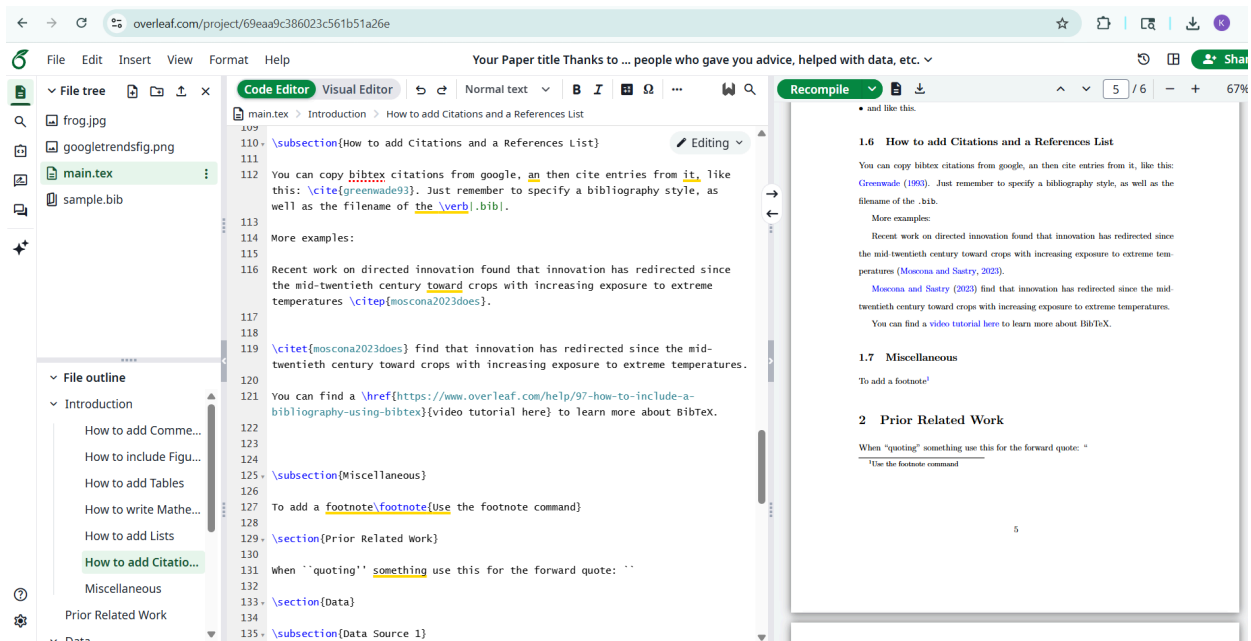

Track (A) - 4. Intergenerational Mobility Across US Counties

Use the Opportunity Insights **county-level mobility data** to build a model predicting upward mobility from **county characteristics**: segregation, school quality, family structure, income inequality, and commuting patterns. Baseline: OLS with the variables Chetty and coauthors emphasize. ML comparison: random forest with feature importance analysis. The interesting question is not just predictive accuracy but whether ML uncovers interactions that the linear model misses, and what those interactions imply for policy.

5. Progress Report / Status Summary

Chetty et al.(2020) find that intergenerational mobility also has a lot of race disparity in the US.

low Intergenerational mobility in the United States.	intergenerational mobility differs by race.
--	---

We're interested in exploring this dimension of intergenerational mobility. Through our econometric and ML models, we want to uncover how the importance of key characteristics determining intergenerational mobility shifts with race.

6. Staff Support

- Guidance on proper data cleaning practices and confirmation on our chosen methodology.
- We plan to discuss our findings and policy implications with the GSI to receive input in the context of existing research and policy debates.
